

Fish 2000 Safety Knife | KN31F20606MB

Fish 2000 Safety Knife

The Fish 2000 disposable safety knife is moulded from metal detectable plastic and incorporates stainless steel blades. The knife features a primary safe use cutting blade, as well as a spring-loaded auto retractable hook blade at the rear of the knife.

The primary blade is ideally suited for cutting strapping, paper, and plastic wrap material, whereas the pop-out hook blade is ideally suited for applications such as cutting box tape and cable ties.

Fish 2000 Knife Advantages

- ✓ Detectable by in-line metal detection systems
- ✓ Visible blue colour for easy visual identification
- ✓ Multi-functional knife ideal for strapping, paper, plastic wrap, box tape, rope, string and cable ties
- ✓ Concealed blades minimise the risk of injury and drawing blood
- ✓ Simple design minimises any potential 'germ traps' and features a lanyard point
- ✓ Textured surface for firm grip
- ✓ Can be used as part of HACCP and BRC procedures
- ✓ Displays due diligence in the prevention of foreign body contamination

Product and Packaging Information

Product Code	KN31F20606MB	Blade(s)	Straight & Hook Blades
Pack Size	10	Casing Material	ABS
Pack Weight	0.40kg	Blade(s) Material	Stainless Steel
Colour	Blue	Detectability	Metal Detectable
Dimensions	165 x 40 x 10mm	Commodity Code	82119200

Safety Certificates / Approvals

BRC Compliant ISO 9001:2015 Made In Britain

Metal Detectability

The Fish 2000 safety knife is moulded from an electromagnetically detectable plastic compound. The detectability of these materials will vary based upon the metal detection systems being used and their calibration. All components of this safety knife are manufactured from metal detectable polymers or stainless steel, making the product fully metal detectable. Detectability performance will vary based on, but not limited to the following factors:

- Calibration Levels
- Product Type (E.g. Wet, Dry, Frozen, Liquid)
- Aperture Dimensions
- Orientation

Orientation is a highly influential factor for the metal detectability of a contaminant that is non spherical, i.e. it will be easier to detect the contaminant when passing in one orientation compared to another - this is known as the orientation effect.

For this reason BST recommend that all our products be thoroughly tested on your metal detection systems by a trained and certified professional. It may be the case that your equipment needs to be re-calibrated in order to reliably detect this product. Such a professional should be available by contacting the manufacturer of your metal detection system.

The information provided in this product specification sheet is based on our experience and knowledge to date and we believe it to be true and reliable. This information is intended as a guide for your use of our products, the use of which is entirely at your own discretion and risk.
